

# Spend less to keep your products fresh.

## Retrofit Program: Refrigeration

When it comes to refrigeration, turning up the temperature is not an option. You can make your equipment more reliable with EC motors, LED lighting, anti-sweat heater controls, and improved insulation. Upgrading to a more efficient system can improve lighting, decrease moisture, and lower electricity costs. Not only that, but you'll also be able to increase shelf life and keep your product looking fresh.

Financial incentives available at [retrofitmybusiness.com](http://retrofitmybusiness.com)

# Sell more products. Use less energy.

## More competitive.

EC motors use up to 40% less electricity. Adding a controller can give you even more savings.

## Less frost and sweat.

Use humidity responsive anti-sweat controls instead of “always on” controls to prevent fogging and save electricity.

## More visual appeal.

LEDs can make products and displays look better for your customers. Plus, they emit less heat, which saves you even more.

## Better business.

Having more money to grow, expand, and improve your company is always a good thing.

### Jake Nixon

VP, Mission Produce

“We were able to design a system that is efficient and takes advantage of advanced controls.”

Retrofit Electricity Savings: 663,000 kWh

Annual Cost Savings: \$68,289

### Robert Kuenzlen

EVP, Mike and Mike's Organics Inc.

“With the incentive we received, our up-front investment will have paid for itself in 3 years.”

Retrofit Incentive Received: \$12,925

Annual Cost Savings: \$14,218
